requests: clonerequest@sanger.ac.uk

On May 27, 1999 this sequence version replaced gi:4775627.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

Only a small overlap as described above.

The following abbreviations are used to associate primary accession

numbers given in the feature table with their source databases:

Em., EMBL, Sw.; SWISSERCT; Tr.; TREMBL, WD:, WORMER; Information

on the WORMERP database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence

has been finished according to sequence map criteria as follows.

An attempt is made to resolve all sequencing problems, such as

compressions and repeats, but not necessarily within known

annotated repeat sequence elements. Where the sequence is

anbiguous, there is an annotation using the 'unsure' feature key.

This sequence was generated from part of bacterial clone contigs of

human chromosome 22, constructed by the Sanger Centre Chromosome 22
